STRAWBERRY PLANTS

KELLOGG'S PREMIER—The very best of all early varieties. We have never found anything to equal it. Berries are large, beautifully formed, bright red through and through. It is delicious in flavor and a splendid shipper. We have fruited it eight years and consider it the money-making king of all early varieties. It produces a very heavy crop and you should plant heavily, whether growing for home use, local market or distant shipment. If Premier has any weak points, we have not found them and we advise all those in sections where early berries are in demand to include Premier, whether setting fifty plants or fifty thousand.

HOWARD NO. 17—This berry is exactly the same as Premier. We have kept our original stock separate for those who wish to try it for themselves, but we know it is the same in every respect. No higher place can be given it.

SUCCESS—Mid-season. One of the best mid-season varieties. Makes wonderful yields on any soil that will produce strawberries of any kind. Fruit is large to extra large, bright scarlet color; flavor is mild, sweet and rich.

BIG JOE—Mid-season. One of the most popular shipping berries on nearly all large markets. It is a strong grower, making plenty of plants for a good fruiting bed. The berries are large, bright red and have large, light green caps, which make the berries very attractive and adds to the selling price. The quality is good and the berries are quite firm. It is a good shipper and equally good for fancy local market purposes. One of the most productive.

COOPER—This variety has had a wonderful sale during the past two years and it seems to merit the confidence placed in it. Cooper is probably the largest strawberry grown and it is also a heavy cropper, so the amount of fruit produced is enormous. It is a mid-season, staminate variety. The fruit is of a beautiful bright red color and of excellent quality. On account of its large size and beautiful appearance it sells at a premium over most other sorts and is especially recommended for supplying home markets.

CHESAPEAKE—Late. Ripens a little earlier than Gandy, but holds out about as long and much more productive, without green tips. Has a beautiful appearance, extra large, even in shape and uniform in size; plants are strong and healthy, dark green in color, rich and vigorous, no rust, no disease, in fact no weakness of any kind. This is a good one and is well known and extensively planted where strawberries are grown.

WM. BELT—Mid-season. Fruit is very large and firm, of a delicate flavor. Succeeds on a great variety of soils. A very good one.

AROMA—Late. Planted in all sections of the country, especially in the Middle West and Southern States. Fruit large. Quality unsurpassed. Very productive.

Testimonials

Trucksville, Pa.—The plants which I have received from you in the past have been very fine.—Harry S. DeWitt.

Bridgeport, Conn.—Dear Sir: I prefer your plants as they are the best I have had from any dealer.—D. W. Russell.

Fall or Everbearing Strawberries

Everbearing strawberries have been produced successfully wherever spring-bearing varieties are grown. The plants are set in early Spring, just like other strawberries; they are hoed, cultivated and fertilized just as other varieties. For best results, the blossoms should be kept pinched off until the last of June, or middle of July. About August 1, you can commence picking fruit and continue to get it until freezing weather. The second year, the plants will fruit in the spring and if reasonable, will continue to fruit all through the summer and early fall months. If you neglected to set some plants last Spring, so as to have some fruiting beds this Spring, the everbearers, planted this Spring will bear you a crop of berries the first year, **ONLY A FEW WEEKS AFTER THE PLANTS ARE SET.** If the ground is rich and moist, these can be allowed to commence fruiting earlier than August 1, so that you can have strawberries all through the season, as well as in the fall. No investment you could make will give the whole family more satisfaction and pleasure than a plot of these berries.

PROGRESSIVE—The most widely grown and most popular of all the Everbearing varieties yet introduced. With us and with many others, Progressive leads them all because of its remarkable yielding qualities; berries medium in size and produced in great abundance, and the berries are simply delicious in quality. If kept closely picked the berries are firm enough to stand shipment. The most striking feature of the Progressive is that you will get fruit a few weeks after the plants are set and that they continue to bear until freezing weather. If you like strawberries, you will get more pleasure in a plot of Progressive Everbearing than any way you could spend an equal amount. Try some and see. Compared to other Everbearing varieties Progressive grows better, yields more, and is of better quality than any variety we have ever tried. Many of our customers are growing Progressive for market and they are making big money as the fruit sells readily at big prices.

CHAMPION—This variety has only been on the market for a few years. With us it is very similar to Progressive. It is almost impossible to detect any difference in the plant growth or in the size, appearance, and quality of the berries, and all the good things we have said about Progressive are equally true of Champion. We do not claim that they are identical; but they are so near alike there is very little advantage in planting one rather than the other.

KELLOGG'S PERFECTION—This is the largest of all the Everbearing varieties. Berries are larger than Progressive or Champion, but does not bear as much fruit as Progressive or Champion.

KASOTA—Originated and introduced by the late H. J. Schild of Michigan. It makes a good growth of large healthy plants and produces plenty of fruit the first season on both the old and young plants. The fruit is of excellent quality.

MASTODON—A strong vigorous grower, good runner maker and hardy heavy fruiter. Most of the berries are large and of a pale red color. Price six plants for \$1.00; twelve plants for \$1.50.

Testimonials

Tullytown, Pa.—Received strawberry plants O. K. and am more than pleased with them. They have the finest roots of any I have ever seen. I certainly will recommend you to my friends.—Samuel Dingley.

Hellertown, Pa.—Received plants yesterday and they are very sturdy and vigorous looking.—Annie L. Helms.
